## Dylon Machine Fabric Dye Instructions - for a 40°C pack

### Product Information

- For use in automatic front-loading machines only.
- Suitable fabrics: cotton, linen, viscose and polyester/cotton mixes. Lighter shades on polyester mixes because pure synthetics do not pick up the dye.
- One pack will dye up to 600g /1lb dry weight fabric. Dyeing larger amounts (up to 1200g) will give a lighter colour.
- Pack colours are achievable on white fabric. If fabric is already coloured, the colours will mix (e.g. red dye on yellow fabric will give an orange result).
- Dye will not cover patterns, stains or bleached areas.
- You will also need 500g / 1lb of salt (regardless of the number of packs used) and a pair of rubber gloves.

### Approximate Weight Guide

Item	Weight	Packs Required
Jeans or Trousers	600g (1 1/4lbs)	1
2 Shirts	500g (1lb)	1
Bath Towel	600g (1 1/4lbs)	1
Double Sheet	600g (1 1/4lbs)	1
Double Duvet Cover	1200g (2 1/2lbs)	2
Curtains	2kg (4lbs)	4

### How to use

1. Weigh dry fabric to check that you have sufficient dye. Wash thoroughly, even if new, to remove stains or dressings which may not be visible to the eye. Leave damp.
2. Wearing rubber gloves, empty full contents of pack(s) into dry drum (not soap dispenser).
3. Add 500g of salt, covering area where powder was added (only 500g of salt is required regardless of the number of packs of dye).
4. Put in damp, unfolded fabric.
5. Select and run a 40°C cotton programme (do not use prewash, economy, quick wash or half load cycles)
6. When complete cycle has finished, add your usual washing detergent and run a 40°C cotton programme.
7. When complete cycle has finished, remove your item from the machine, add your usual washing detergent and run another 40°C programme with the machine empty to ensure that the machine is clean.
8. Dry fabric away from direct heat and sunlight. Wash separately for the first couple of washes to remove any excess dye.
